

提高听力的最根本途径

听写

## 听写

1. 整句听写 (  $\leq 5$  遍 )
2. 检查漏洞
3. 整句模仿
4. 整篇跟读

AAA\_\_\_\_\_AAA

AAABBBBBBBAAA

## 听写材料

Marine Plant Flees Predators 🦑

SSS

A **rabbit** might **outrun** a **fox**, but stalks of wheat aren't making any quick getaways. Plants, for the most part, don't **flee** from **predators**.

SSS

**But** some primitive marine plants are breaking the rules. Marine scientists at the University of Rhode Island School of Oceanography recently discovered a species of **phytoplankton** that actively avoids being eaten.

SSS

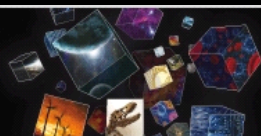

The scientists observed that the phytoplankton, called *Heterosigma akashiwo*, swam away from zooplankton, its **natural predator**, yet remained undaunted by the presence of predators with an appetite for other things.

## SSS

What's more, when the scientists provided an area that the predators couldn't tolerate—sort of a safe haven if you will—the phytoplankton took **refuge** in that location. They also avoided empty water that had previously **contained** predators, leading researchers to believe they're responding to some sort of **chemical signal**.

## Food Chemists Celebrate Tasty Centennial

It's the 100th anniversary of the Maillard reaction, perhaps the most important chemical reaction that takes place to enhance food's taste when we cook.  
Karen Hopkin reports
