=A letter=A card=A text message=An E-mail=A
positive change in your life=An important
decision you made=An important stage in your
life= (A piece of family news=Your
experience of getting congratulations from
others=Your experience of getting money as a
gift=A personality you have= A person you
helped=A thing one of your friends did made
you admire=The first day of your college)

A thing you learned from math

I want to talk about a thing I learned from multiplication. Well, a lot of guys mistakenly believe that math is just a bunch of numbers and formulas. But sometimes a simple math theory could perfectly explain the complicated life.

I want to talk about the words my mom told me after I failed the college entrance examination.

At that time, I got really depressed, mainly because three years of hard work finally turned out to be in vain. I totally lost confidence and even started to doubt myself. One day, my mom asked me out for a walk. Walking along the river in the park, she said to me,

“You know, this is life. It is full of ups and downs. It is quite like multiplication in math. Your life achievement always equals your capability multiplies your confidence. Say, if two guys have the same capability, the one who finally stands out must be the one who has more confidence. Awfully, if one has no confidence whatsoever, that guy will definitely turn into a total loser because any number multiplies zero equals zero.” Her words inspired me greatly.

谢谢
